1. Update Sites for Hotfix Releases in Kony Studio

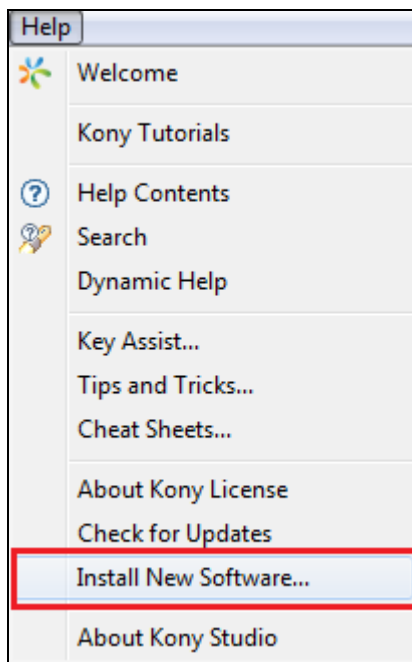

Starting with the 5.5 Release, Kony Studio hotfix updates are available only through hotfix update sites. Following are the update sites for OS X and Windows (64-bit and 32-bit) operating systems:

- **Update site for Kony Studio on OS X:**
<http://download.kony.com/studio/65/hotfixmacsite.xml>
- **Update site for Kony Studio on 64-bit Windows OS:**
<http://download.kony.com/studio/65/hotfixsite.xml>
- **Update site for Kony Studio on 32-bit Windows OS:**
<http://download.kony.com/studio/65/hotfixwin32site.xml>

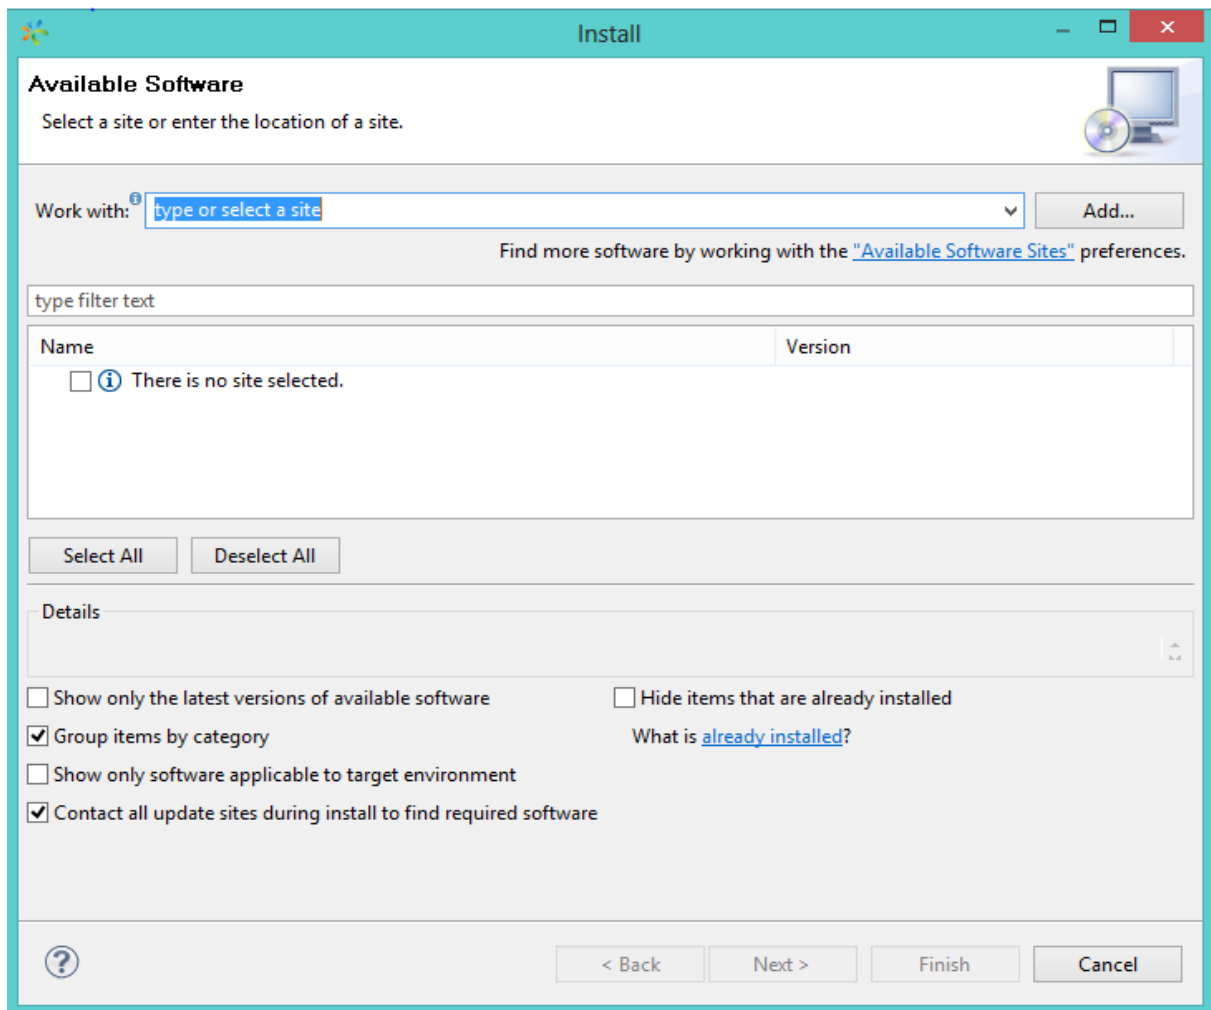

2. Updating Kony Studio for a Hotfix Release

To upgrade Kony Studio for a hotfix release, follow these steps:

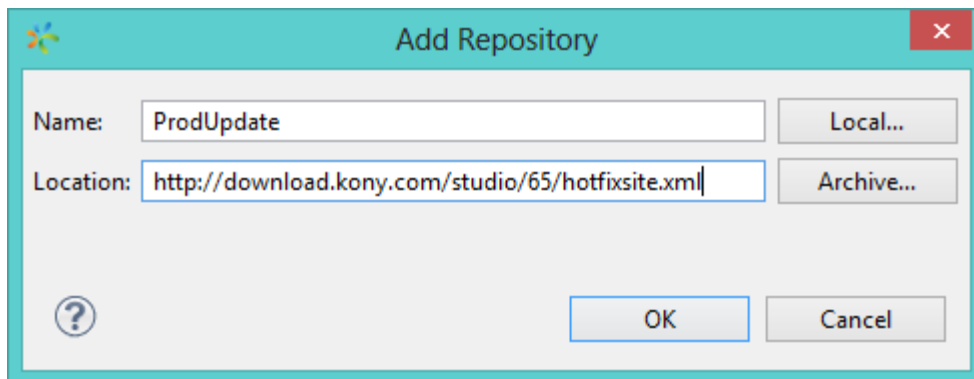

1. Start Kony Studio.
2. On the **Help** menu, click **Install New Software....**

The **Install** dialog appears.

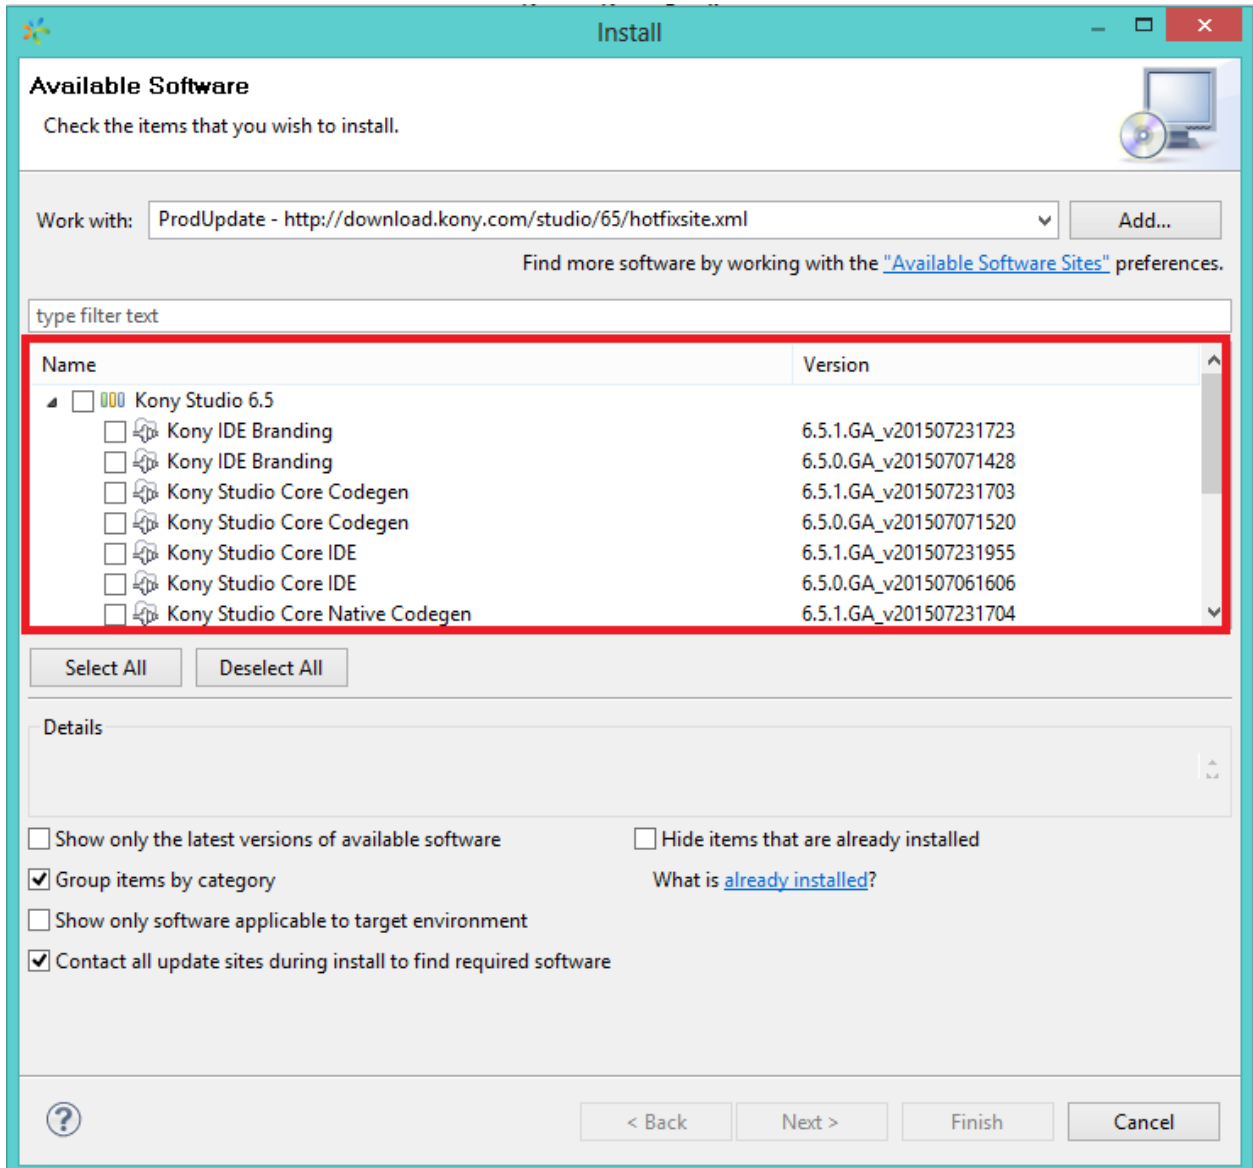

3. Click **Add** in the **Work with** area. The **Add Repository** dialog appears.

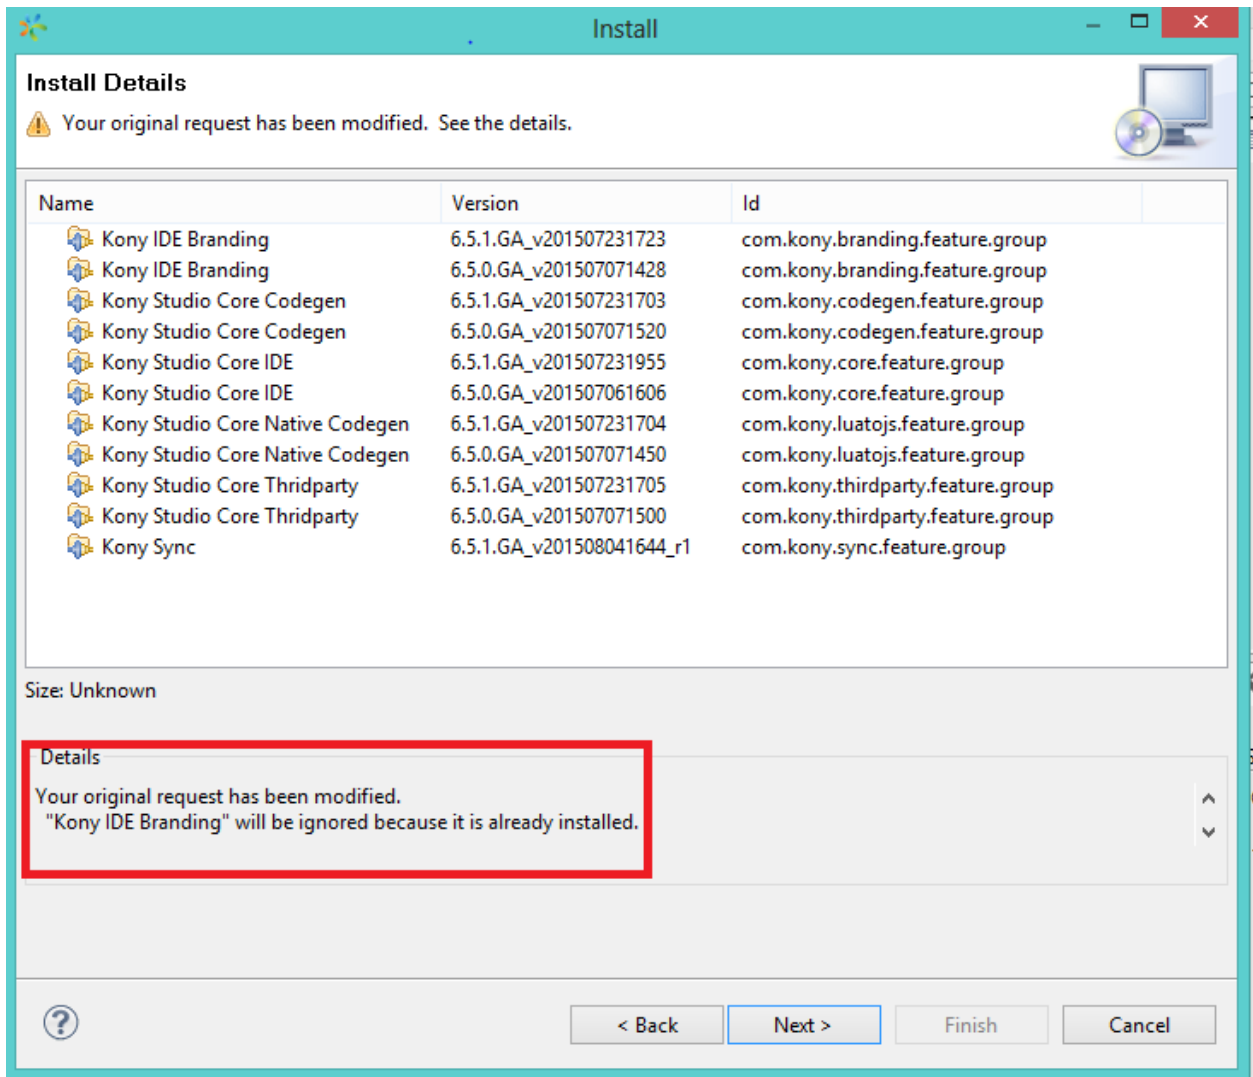

4. Enter a name for the repository in the **Name** box.
5. Enter a location for the repository in the **Location** box.
 - A Location is generally an external URL pointing to a download location.
 - For example, if you want to upgrade the hotfix for a 64-bit Windows operating system, type **http://download.kony.com/studio/65/hotfixsite.xml** in the **Location** box.
 - To install hotfixes for other operating systems, type the relevant URL in the **Location** box.

Note: To view the update sites for hotfix releases, see [Update Sites for Hotfix Releases](#).

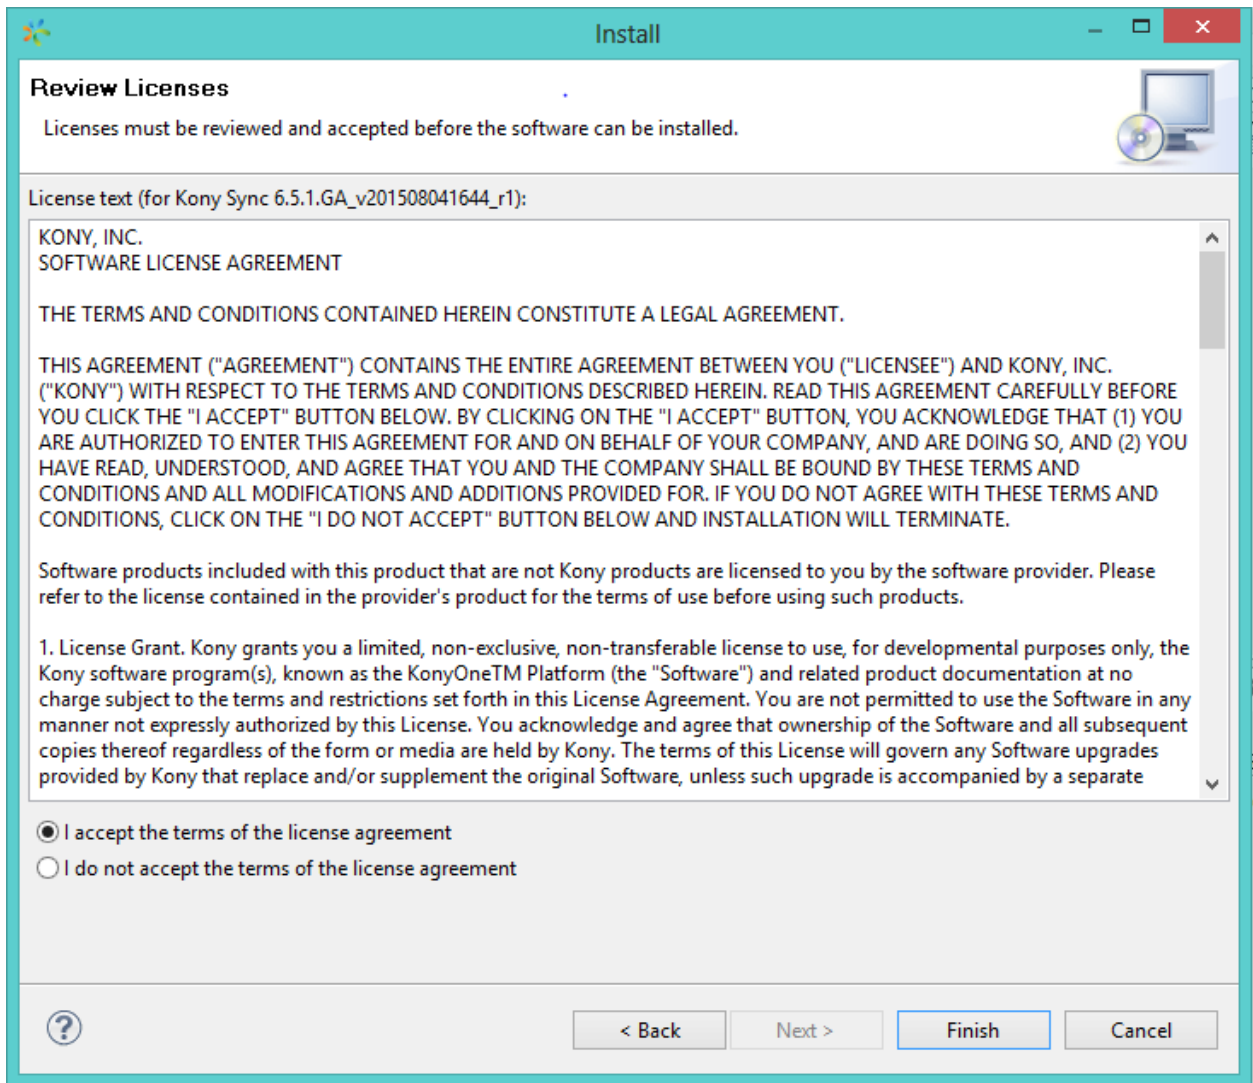

- Click **OK** to add the repository. After the repository is successfully added, you will see all the plug-ins available from the update site URL.

- Select the required updates by expanding each item. Alternatively, you can click the **Select All** option to select all available updates.
- Click **Next**. The **Install Details** pane appears.
- The **Details** pane displays additional information about the selected plug-in.

10. Click **Next**. The **Review Licenses** pane appears.

11. Read the license agreements and select **I accept the terms of the license agreements**.
12. Click **Finish**. The **Installing Software** dialog appears displaying the progress of the installation.
 - Security warnings may appear during the installation. You can ignore the warnings, and click **OK** to continue the installation.
 - After the installation is complete, a message appears to restart Kony Studio for the changes to take effect.

13. Click **Yes** to restart Kony Studio.

Note: *To install updates for other operating systems, type the required URL in the Add Repository dialog, and repeat the steps above.*

3. New Features in 6.5 GA

Kony Studio 6.5 GA

The main features of Kony Studio 6.5 GA include:

1. **Wearables Support:** Kony Studio 6.5 supports mobile application integration with Apple Watch and Android Wear. You can now use Kony Studio to enhance your mobile apps with the following wearable functionality:
 - a. Display notifications in Apple watch and Android wear.
 - b. Add custom actions to the notifications.
 - c. Configure callbacks for custom actions.
 - d. Manage local notifications.
 - e. Package default applications (for Apple Watch only).
 - f. Manage application state transitions with background and foreground mode (for Apple Watch only).
2. **Mobile-First APIs** – These new API's fully represent the underlying Native frameworks providing the developers the flexibility to develop using JavaScript for the actual Native API's. The following API's are being introduced.
 - a. iOS:
 - i. Apple Pay.
 - ii. Apple HealthKit.
 - b. Android:
 - i. Near Field Communication (NFC).
 - ii. Bluetooth.
 - iii. Voice Input/Speech.
 - iv. Job Scheduler
 - c. Threading API's:
 - i. Threading APIs are introduced to enable the developer to choose where the JavaScript code gets executed. Developers can execute the JavaScript code either on a main thread or a worker thread.

3. **Application Performance Management (APM)** – Application Performance Monitoring provides an advanced events feature to track what is happening within the mobile application. This includes several standard events such as page loads, button clicks, and gestures along with performance events to track errors and crashes. The developer is also free to define custom events and trigger them based on user activity to get a complete picture of the user journey through the application. This data can be used with existing event driven standard reports or can be incorporated into custom reports to track key business metrics and identify user trends. Kony also provides out of the box integration with leading APM vendor Criticism.

4. Known Issues

Following are the known issues in 6.5 GA:

1. The Functional Preview feature does not work. To preview the application, build and view on an emulator or device.
2. The Quick Preview feature in Android platform does not work.
3. Compared to other platforms, performance issues are observed while using onTouch events in Windows.
4. In iOS and Android platforms, support for recurring local notifications is not available.
5. In SPA platform, if multiple scroll boxes are present on a form you cannot scroll the form vertically.
6. In iOS platform, if you select Enable Mobile First APIs in application properties dialog, the HealthKit and ApplyPay APIs information is added to the application. Even if you clear the Enable Mobile First APIs option, the API information remains.
7. With ATS disabled, if the server is not TLSv1.2 compliant and self-signed, SSL handshake may fail. Since self-signed certificates are not for production use, this issue is NOT critical
8. JSBindings: kCAFillModeFrozen is deprecated with iOS9. Commenting the relevant lines would solve the issue
9. Application is not launching automatically on simulator when we try to launch in "open in preview" for iOS. User has to tap on the app on the simulator to launch it

5. Minor Enhancements in Patch Releases

5.1 Support for Windows 10 backward compatibility

5.1.1 Windows 8.1 Tablet-XAML-GA 6.5.2.1

First set of backward compatible plugins for Windows 10.

Please refer to below link to download the plugins

Update site for Kony Studio on OS X: <http://download.kony.com/studio/65/hotfixmacsite.xml>

- **Update site for Kony Studio on 64-bit Windows OS:**

<http://download.kony.com/studio/65/hotfixsite.xml>

- **Update site for Kony Studio on 32-bit Windows OS:**

<http://download.kony.com/studio/65/hotfixwin32site.xml>

- Please refer to the below link for Kony updates on Windows 10

<http://developer.kony.com/KonyUpdatesOnWin10>

Dependency Plugin: Need to consume with IDE-GA 6.5.2

5.2 iOS

5.2.1 GA 6.5.2.3

iOS9 backward compatibility Support

5.3 Android

5.3.1 GA 6.5.2.5

Support for Android 6.0 Marshmallow

6. Issues Fixed in Hotfix Releases
